Education

Self Taught

My expertise comes from independent study and hands-on experience. I've learned through books, online courses, and active participation in tech communities and forums, as well as by receiving guidance from senior developers in the companies where I've worked. This combination of resources helped me grow both technically and professionally.

Experience

Localline — Remote
FullStack Engineer — 04/2024 – Present
- Developed and maintained a multi-language farm commerce platform, enabling seamless transactions and expanding the user base internationally.
- Contributed to the company's growth from seed stage to Series A funding by delivering key features that improved product scalability and user satisfaction.
- Refactored core parts of the application, enhancing performance and improving UI/UX consistency across the platform.
- Created a flexible rich-text editor for email generation and for user content creation.

Stone Payments — Remote
Frontend Engineer — 08/2021 – 03/2024
- Developed and maintained banking payment features, improving user experience and processing efficiency.
- Built internal automation libraries, improving development efficiency and reducing manual tasks.
- Designed and implemented a 2FA security feature, significantly reducing unauthorized access incidents and increasing customer trust and security compliance.
- Inserted test coverage, ensuring software reliability and reducing production bugs.

Leadership & Activities

Hackathon — Remote
Developer — 03/2021
- Led the planning and design of a creative collective portfolio in collaboration with 2 developers for a programming competition. The project focused on showcasing each participant's skills through an innovative portfolio design. We combined creativity and technical expertise to deliver a unique final product.

Projects

AudioScript — Remote
Developer — 03/2023
- Developed an AI-driven transcription and translation solution utilizing OpenAI's Whisper model, providing accurate audio and video transcriptions. Integrated GPT-based multilingual translation, supporting transcription and translation across multiple languages. The system also features PDF export functionality for easy sharing and storage of transcriptions and translations.

Skills & Interests

Technical: JavaScript, TypeScript, Python, Django, HTML, CSS, React, Linux, and Figma.
Interests: Artificial Intelligence, Philosophy, Research, Literature, Writing, Algorithms, Computer Vision and Design.
Language: Portuguese and English.
